DETAILED ACTION

Upon further consideration prosecution has been re-opened and the final rejection has been withdrawn. Also upon further consideration claims 1, 3-7, and 13 cannot be considered patentable over the newly applied art.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims, 1, 3-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Chen et al (WO 99/63972 hereafter '972). The claims are drawn to method of formulating a dosage form by electrostatically depositing a thyroid hormone onto a substrate. The claims further recite a dosage form created from this method. The dosage form further comprises a film top coating.

3. '972 discloses a method for electrostatically depositing a drug onto a dielectric chuck (abstract). One of the drugs deposited is levothyroxine (examples). The substrates can be ethyl cellulose (table II). The powder size of the drugs is between 500 and 800 nm, well below 5 microns (pg. 7, lin. 6- 12). The dosage form further comprises a film coating (pg. 49, lin. 1-pg. 50, lin. 11). Claims in the instant claims reciting stability limitations are dependent upon the substrate selected, and since the substrates of '972 are identical to that of the instant claims, the stability properties would logically follow and be identical to those of the instant claims. These disclosures render the claims anticipated.

Response to Arguments

4. Applicant's arguments, see Remarks , filed 2/20/04, with respect to the rejection(s) of claim(s) 8-12 and 14-19 under USC 103 have been fully considered and are persuasive.

Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Chen et al (WO 99/63972).
